Thank you for selecting Crane Plumbing Products. To ensure this product installs properly, please read these instructions carefully before you begin. Be sure your installation conforms to local codes.

**REMOVE OLD TOILET:** Close toilet supply valve and flush the toilet. Sponge any remaining water from the bowl. Disconnect and remove supply line. If replacing valve, first shut off the main water supply. Remove mounting bolts and slide bowl off the carrier. Plug waste opening to prevent sewer gas from escaping. Clean away old wax, etc. from installation area.

Before beginning: The toilet is in two cartons. One contains the bowl, and the other contains the tank, cover and assorted parts.

**Closet Carrier Support:** The appropriate wall carrier must be obtained for this unit. Refer to the instructions supplied with the carrier for proper installation of a 4-bolt support system, wall cavity requirement, and rough-in information for waste outlet piping.

A word of Caution: The new toilet is made of fine china like the best quality table ware. It is ruggedly constructed: however extra care should be exercised during installation when rough handling and the dangers of dropped tools threaten to chip or crack it.

**Water Supply:** If your water line is through the wall, install an Angle Stop. If it is through the floor, install a Straight Stop.

### Installing the Toilet Bowl and Tank

1. **SIDE VIEW**
   - The carrier studs should extend 2-1/8” from the finished wall (A). Bearing washers and nuts must be flush with the wall (B). The waste inlet hub should extend 5/16” from the finished wall (C). Use a felt or neoprene gasket (not a wax ring) on closet outlet. Refer to instructions provided with the Closet Carrier System for specific installation requirements.

   DO NOT APPLY TOP RIGHT FIBER WASHER AND CAP UNTIL OTHER CAP NUTS HAVE BEEN FIRMLY TIGHTENED USING A WRENCH. Pour water into the bowl to prevent the escape of sewer gas. Install bowl on support using cap nuts and fiber washers with the back-up nuts and washers. DO NOT OVERTIGHTEN NUTS, AS VITREOUS CHINA EASILY CHIPS AND CRACKS. Install top right cap nut with fiber washer and run up hand tight. Wrench tighten 1/4 turn. Apply sealant to gap between bowl and finished wall. Wipe away excess sealant. Lift the bowl and move it toward the wall. Slip mounting studs through the corresponding holes in the bowl. Make sure the gasket is in place.

2. **Place the felt or neoprene gasket on the bowl outlet.** (wax ring is not recommended) When the bowl is installed, the gasket must be compressed sufficiently against the hub to effect a gas and watertight seal. NOTE: Bearing nuts and washers must be set to take full loading from the fixture allowing 1/16” clearance between fixture and wall. Follow support manufacturer’s recommended setting of closet outlet connection.

3. **The tank should be inverted on the floor after removing the lid and parts bag. Open the plastic envelope and place the large doughnut shaped washer snugly on the threaded tank outlet. Invert the tank and lower onto bowl so that the large washer fits evenly into the bowl water inlet opening. Place the rubber washer on the bolts and insert the bolts downward through the bolt holes and secure with metal washers and nuts.

4. **Connect the cold water line to the tank with your straight or angle stop. Place the washer, then the plastic nut on the tank end of the connecting pipe and bend the pipe to fit into the inlet hole on the water regulator. Tighten all coupling nuts securely. DO NOT USE PLUMBERS PUTTY!**

5. **ATTENTION INSTALLER: PLEASE LEAVE THESE INSTRUCTIONS WITH THE CONSUMER**

Connect the plastic tubing from the top of the water inlet regulator into its holding ring inside the overflow tube. If necessary, excess may be trimmed to eliminate any kinking of the line. **NOTE:** Check all connections for several days to detect any leaks which may develop. If they do, tighten all connections per instructions. Crane Plumbing, LLC is not responsible for leaking water connections. Also, after several days, remove the bolt caps from the bowl and tighten the nuts snugly.
7 Adjusting Tank Water Level

NOTE: The Ball Cock or Pilot valve in this toilet is designed to operate at a minimum of 20psi and a maximum of 80psi. Turn on the water supply by opening the angle or straight stop. For proper flushing the tank Must fill to the Water Line marked on the inside of the tank. If the water is Below the Water Line mark, turn the screw clockwise, and if the water level is Above the Water Line mark, turn the screw counterclockwise. DO NOT BEND THE FLOAT ROD. This would constitute improper maintenance and can void the warranty.

8 Place the cover on the tank. Place the plastic bolt covers firmly in place. Install the toilet seat in accordance with the manufacturers instructions.

9 Care and Cleaning of Vitreous China

Your new toilet is made of stain, acid and abrasion resistant vitreous china. But, like all fine finishes the china requires reasonable care. For day-to-day cleaning, wash with warm water, a soft cloth, and a mild detergent such as Handy Andy, Mr Clean or Lestoil. On stubborn stains, use one of the powdered detergents such as Spic & Span, on a damp sponge or scouring pad of nylon, saran, or polyethylene. Never use abrasive scouring powders, cleansers, or pads as they tend to create microgrooves that dull the finish and allow dirt to work into the surface. Use of tank cleaning products containing calcium hypo chlorite (chlorine) or any other reactive chemical shall constitute improper maintenance.

10 WINTERIZING VITREOUS CHINA WATER CLOSETS.

ALL WATER MUST BE REMOVED FROM THE TANK AND BOWL.

An anti-freeze solution must be poured into the bowl through the tank flush valve opening inside the tank to insure mixing with any water that may remain in the distribution area under the tank. Continue to pour anti-freeze solution until the level of solution in the toilet bowl stops increasing. There must be liquid in the bowl at all times to prevent sewer gas from coming through the toilet.

NOTE: It is recommended that RV Anti-freeze be used.
Limited Lifetime Warranty on China / Limited One Year Warranty on Parts

Subject to the "Exclusions" set forth below, Crane Plumbing L.L.C. promises to the consumer to repair, or at the option of Crane Plumbing L.L.C., to replace any part of this plumbing product made from vitreous china which proves to be defective in workmanship or materials under normal use, and any other supplied part of this product under normal use for one year from the date of purchase. All costs of removal, transportation and reinstallation to obtain warranty service shall be paid by the consumer. During the warranty period for china and one year period for parts, Crane Plumbing L.L.C. will provide, subject to the "Exclusions" section set forth below, all parts free of charge, necessary to correct such defects if this plumbing product has been installed and maintained in accordance with written instructions furnished by Crane Plumbing L.L.C. with this plumbing product.
